

**V37**

The map displays a detailed view of a region, likely a flood zone or a water body, highlighted in blue. The blue area covers a significant portion of the left and center of the map, following a winding path that suggests a river or a series of connected water bodies. The surrounding land is divided into a dense grid of small, irregular parcels, some of which are shaded in light gray, indicating different land uses or ownership. A network of roads and paths is visible throughout the area. In the top right corner, there is a small, irregularly shaped area highlighted in yellow, which appears to be a separate land parcel or a specific point of interest. The overall layout is typical of a cadastral or topographic map used for land management or planning purposes.

The image is an aerial photograph of a rural area in the Netherlands, identified by the label 'V38' in the top left corner. A prominent pink line outlines a specific region, which includes several blue-shaded areas. These shaded regions appear to be water bodies or wetlands, interspersed with agricultural fields and some built-up areas. The map shows a network of roads, railways, and property boundaries. The overall layout suggests a planning or zoning map for a specific project or area of interest.

A scale bar showing distances from 0 to 1000m. The bar is divided into segments of 200m each, with labels at 0, 200, 400, 600, 800, and 1000m.
